Career Objective

Design and implement large-scale DevOps practices using open-source tools to accelerate application deployment cycles and ensure high availability through a stable, self-healing infrastructure.

Technical skill

- **Version Control** : Git, GitHub, GitLab
- **Continuous Integration** : Jenkins
- **Build Tool** : Maven
- **Code Quality & Security** : SonarQube
- **Configuration Management** : Ansible
- **Containerization** : Docker
- **Container Orchestration** : Kubernetes (Basic Knowledge)
- **Infrastructure as Code (IaC)** : Terraform
- **Logging & Monitoring** : CloudWatch, Splunk, Prometheus, Grafana
- **Operating Systems** : Linux, Windows
- **Web Application Server** : Apache Tomcat
- **Cloud Platforms** : AWS
- **Databases** : MySQL, MongoDB
- **Programming** : Python

AWS Services

- Elastic Compute Cloud (EC2)
- AWS Lambda
- Simple Storage Service (S3)
- Identity and Access Management (IAM)
- AWS Command Line Interface (CLI)
- Relational Database Service (RDS)
- Elastic Load Balancer (ELB)
- Elastic Block Storage (EBS)
- Virtual Private Cloud (VPC)

Projects

1. End-to-End CI/CD Deployment on AWS with Jenkins & Terraform

Description: Used a reference source code and implemented an automated CI/CD pipeline to deploy a web application on a Tomcat server using Jenkins, Terraform, and AWS.

Summary:

- Created Infrastructure by using Terraform by running Jenkins Pipeline.
- Setup Jenkins master and slave for build and deployment.
- Setup Tomcat web application server on the Slave server for deployment.
- Used reference source code for the project and integrated with Jenkins.
- Integrated Maven for build automation to get the WAR file for deployment.
- Uploaded Artifacts to S3 to maintain the version availability.
- Deployed the web application on tomcat with freestyle job.

Tools & Technologies Used: Git, GitHub, Jenkins, SonarQube, Maven, Tomcat, Terraform, AWS, Amazon S3.

2. Full stack Node.js Application Deployment on AWS ECS Fargate using Terraform

- Containerized and deployed a full stack Node.js application on AWS ECS Far gate using Docker, creating a fully server less, auto-scalable, and highly available cloud-native architecture.
- Implemented CI/CD pipelines for automated Docker image builds and Amazon ECR integration, enabling seamless deployment across frontend, backend, and database services.
- Provisioned cloud infrastructure with Terraform, including ECS services, ECR repositories, IAM roles, VPC networking, and ALBs, following Infrastructure as Code (IaC) best practices.
- Configured DNS routing via Route 53, ensuring reliable communication between services and secure access to Amazon RDS with support for zero-downtime deployments.

3. EC2 to RDS Migration Using AWS DMS with Infrastructure as Code (Terraform)

- Automated MySQL database migration from EC2 to Amazon RDS using Terraform and AWS DMS, reducing manual effort and ensuring minimal downtime.
- Provisioned and managed cloud infrastructure using Infrastructure as Code (IaC) with Terraform to deploy EC2, RDS, and DMS resources consistently and efficiently.
- Enhanced post-migration stability and security by configuring IAM roles, VPC networking, Cloud Watch monitoring, and automated backup strategies.
- Orchestrated real-time data replication using AWS DMS full-load and CDC tasks, enabling continuous data sync with zero data loss during cutover.

Experience

aiOak

June 2024 - November 2024

DevOps Engineer Intern

Remote | Hyderabad, India

- Developed and maintained CI/CD pipelines using Jenkins and GitHub for streamlined deployments.
- Managed and optimized AWS infrastructure (EC2, Lambda, S3, RDS, ELB, EBS, VPC) for high availability and scalability.
- Implemented Infrastructure as Code (IaC) using Terraform and Ansible to automate provisioning and configuration.
- Containerized applications using Docker; assisted in orchestration using Kubernetes (basic knowledge).
- Collaborated with development and QA teams to enhance build, test, and release workflows.
- Monitored applications and systems using Cloudwatch, Prometheus, and Grafana to identify and resolve issues.
- Managed AWS security by configuring IAM roles, policies, and access controls.
- Automated routine maintenance tasks to boost operational efficiency.
- Documented architecture, processes, and best practices to ensure team-wide knowledge sharing.

Education

Vellore Institute of Technology (VIT), Amaravati

August 2020 - July 2024

Bachelor of Technology in Electronics and Communication Engineering (Embedded Systems) (GPA: 8.23 / 10.0)

Sri Saraswathi Junior College, Ongole

April 2018 - February 2020

Higher Secondary Education (Mathematics, Physics, and Chemistry) (GPA: 8.0 / 10.0)

Sri Surya Vaidyanathan, Ongole

April 2017 - February 2018

Secondary School Certificate (SSC) (GPA: 8.8 / 10.0)

Key Strengths

- Team Player
- Adaptability & Flexibility
- Strong Communication Skills
